Full Stack Project

Overview

A job application tracking platform where users can easily keep a log of all of their job applications at one place, can visualize the data in charts and graphs and also share their interview questions and view other users' interview questions.

Features

1. Login & Register with google authentication
2. User can track his/her job applications through the dashboard
3. Create a user profile and add personal information etc.
4. Dashboard will contain following things:

    A. Categories for different statuses of job application process (wishlist, applied, in progress, offer, rejected)

    B. User can log the application details including company details, designation, important dates, interview questions, salary, location, etc

    C. User can create notes for a particular job application

    D. User can see a timeline of all the job applications

    E. User can visualize all job applications using graphs and charts

5. All the job applications will be shown in categorized format (highlighting the status of the application)

Extra Features

1. A shared platform to showcase all interview questions posted by all the users
6. Anyone can answer the questions and upvote or downvote existing answers
7. Questions will have tags such as "most asked", "difficult", "easy", etc
8. Filters can be added to filter the question based on "designation", "programming language", "tags" etc.
